

AIRVAC 1

Portable HEPA air purifier

- Portable air cleaner
- High capacity HEPA filter
- 99.995% efficient at 0.3micron
- Volume: 1 m³/s or 3600m³/h
- Unit Size: ± 700 x 750 x 1.2m
(Fits through a standard doorway)
- Noise level: ± 56Dba at 3m distance
- Includes Pressure gauge and variable speed controller
- 0.7kw 220v power supply
- Cleans up to 200m² (6 air changes per hour)

Our HEPA filter air purifiers provides healthier, cleaner and safer indoor spaces. Airborne contaminants pose serious health risks. These include: dust, fumes, particulate matter, bacteria and viruses. Air is recirculated continuously by way of a fan through a True HEPA (High Efficiency Particulate Air) filter. HEPA filters are typically used in clean rooms, laboratories, and operating theatres of hospitals. As many of these harmful contaminants are so small, we are often oblivious to their existence. By creating an air cleaning cycle we can greatly reduce our exposure.
